San Francisco, CA 94105

Re: Proposed Part 70 Permits Submittal  
E&B Natural Resources Management Corporation South Cuyama Stationary Source

Dear Mr. Rios:

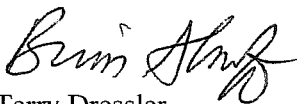

Attached are three Santa Barbara County Air Pollution Control District (APCD) Proposed Part 70 'renewal' permits: Permit to Operate 7250-R7 (South Cuyama Unit), Permit to Operate 8010-R6 (South Cuyama I.C. Engines), and Permit to Operate 9136-R5 (Gas Plant 10) for the E&B Natural Resources Management Corporation's South Cuyama Stationary Source. The renewal permits comprise the third renewal Part 70 permits for this oil and gas production facility. This source remains a major source of reactive organic compounds and carbon monoxide emissions.

The draft permit is open to public review and comments from is April 14, 2008 until May 14, 2008. Drafts of these three permits have also been sent to E&B for comment.

We believe that receipt of the proposed permits starts the USEPA's 45-day permit approval clock; thus, if we do not receive any response from you within this period, we shall assume the permits are approved by the USEPA.

If you have any questions regarding these permits, please call Phil Sheehan of my staff at (805) 961-8876.

Sincerely,

for   
Terry Dressler  
Air Pollution Control Officer
